

Sharing Miracles™ 

Share The Gift of Healing.

**Donate Your Placenta
and Umbilical Cord.**

About Sharing Miracles

At Sharing Miracles, celebrating the miracle of life and honoring the gift of donation are at the heart of everything we do.

We are grateful for the priceless gift that mothers make and recognize the magnitude of their generosity.

Founded by BioTissue, Sharing Miracles was established to provide a supportive program to simplify donating your birth tissue. BioTissue is a leader in regenerative medicine, creating life-changing allografts to help patients regenerate, restore and recover from difficult medical conditions.

What can I expect from the donation process?

Donating your placenta and umbilical cord is one of the easiest ways to make an impact on the health of others in your community. By donating this birth tissue, you can join the 95% of Americans that support donation.

Your placenta and umbilical cord can help up to 75 people.

✓ Simple

It's as simple as providing the necessary consent and answering a confidential questionnaire related to your medical and social history. These questions are similar to those asked of blood donors. There is no cost to you or your family for any part of this donation.

♥ Safe

This donation will take place after the safe delivery of your infant. It will not affect the delivery or the care you and your baby will receive.

😊 Painless

We will obtain a sample of blood collected during your routine prenatal testing, eliminating the need for a second blood draw.

How to Donate

This is the most important day of your life. The quality of care and the safe delivery of your baby is our highest priority.

A Sharing Miracles team member will coordinate your donation, guiding you through:

- Giving informed consent
 - Completion of a medical history questionnaire (20-25min)
 - Providing for access to your prenatal, delivery and infant records
-

Mothers with scheduled C-sections can give the priceless gift of birth tissue.

After you complete the paperwork, our team will coordinate the rest of the process with your doctor and hospital. A Sharing Miracles representative will be at the hospital on the day you deliver to manage the handling and transport of your birth tissue.

The review of your medical record is strictly confidential. Information and documents are accessed only by trained, authorized personnel working in a secure environment.

To ensure the safety of birth tissue for recipients, your blood will be tested for infections that could transmit disease. Abnormal results will be reported to you and your physician.

How does your birth tissue help those in need?

Biological properties in the placenta and umbilical cord help to promote regenerative healing. Grafts made from your birth tissue can help reduce inflammation and scarring while promoting a healing environment. These grafts can be used to facilitate the healing of patients with a wide range of conditions, including keratitis, corneal scars, glaucoma, diabetic foot ulcers, osteoarthritis, and chronic and non-healing wounds, to name a few.

The placenta and umbilical cord are typically discarded as waste, but for patients in need it's a second chance at life.

Visit [DonateLife.net](https://www.donatelife.net) and learn how your donation can bring hope to patients and their families.

BioTissue Holdings Inc., Sharing Miracles' parent company, is accredited by the American Association of Tissue Banks (AATB) to ensure the highest standards in tissue banking leadership, education, service, and research.
